

UKRAINIAN ELECTRICITY MARKET AND NUCLEAR POWER: PATH TO SUSTAINABLE DEVELOPMENT OR DEGRADATION

The Ukrainian Nuclear Forum Association and Ukrainian Nuclear Society are announcing the preparation of the international conference «Ukrainian electricity market and nuclear power: path to sustainable development or degradation», which will take place on December 4th, 2019 at the «Premier Palace» hotel, Kyiv.

Nuclear energy is a strategic sector of Ukraine's economy, providing over 50% of clean electricity to Ukrainian consumers. In July of this year, the electricity market began to work, now is the time to summarize how effective it is, whether a competitive market mechanism has been set up, or whether it achieves its stated goal of providing Ukraine's economy with electricity at affordable prices. These issues will be the main topic of discussion at the conference.

The next topic of discussion will be investments in energy within a new market: implementation of current investment programs, as well as promising investments to support the safety of the nuclear generation and its development. The conference will discuss the European and world practical experience of functioning of energy markets and their opportunities for attracting investment for development. Leading experts of Ukraine, international organizations, experts of leading companies and institutions are invited to discuss these issues.

Ukrainian electricity market and nuclear power: path to sustainable development or degradation

December 4th, 2019, Kyiv

Representatives of the following organizations will take part in the conference

Verkhovna Rada of Ukraine	FORATOM
Cabinet of Ministers of Ukraine	NNEGC «Energoatom»
